

Woodfin-Weaverville RFLOI Questions

- Will you please clarify what is desired for the cost estimation.
 - We are looking for planning-level cost estimates on what will be needed to implement different sections of the project but should address constrained areas that may require non-typical solutions.
- What are the expected parameters for the potential maintenance expenses? Should the cost estimation also include ROW acquisition cost?
 - As there are sections of the greenway that will be in Woodfin town limits, Buncombe County limits, and Weaverville town limits – the portions of the greenway within the respective jurisdiction’s limits are likely to be that jurisdiction’s responsibility but that should be discussed with the steering committee to confirm.
 - Cost estimation should include ROW and preliminary engineering as needed
- Will you clarify your expectations for working with a steering committee (mentioned in tasks 7.2 and 8.2)?
 - For each task (7.2 and 8.2), the consultant is expected to provide information and facilitate discussions on the preferred alignment/alternatives (tasks 7.2) and the draft plan (task 8.2) to enable the steering committee to make decisions and provide feedback on those items. The steering committee is made up of staff from the Town of Woodfin, the Town of Weaverville, and Buncombe County.
